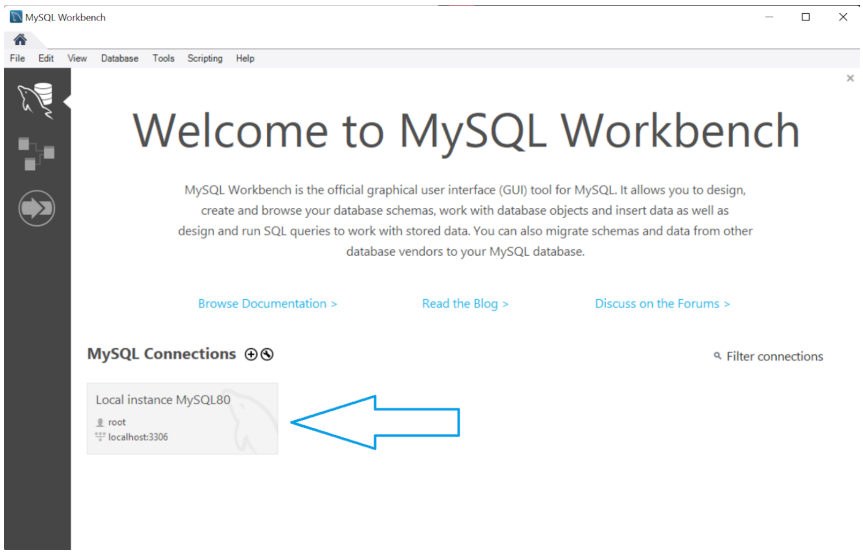
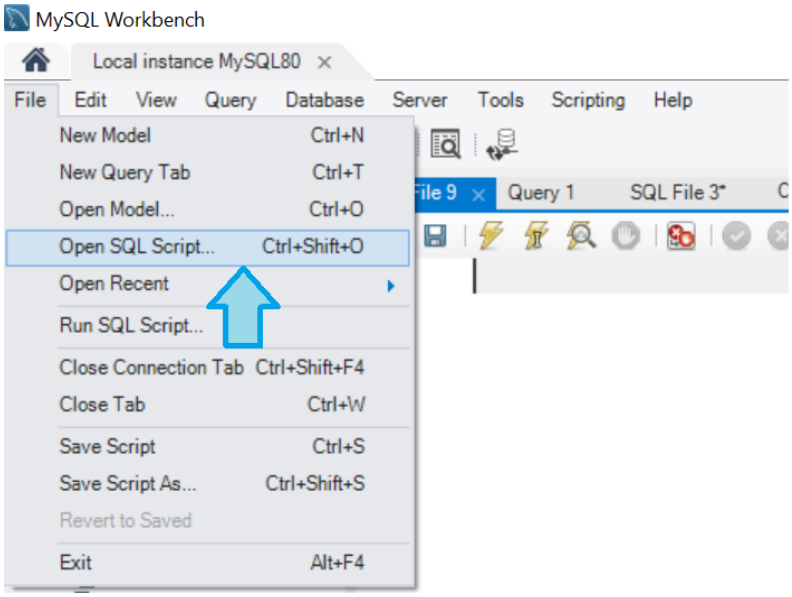
Follow the instructions below to create the schema california_collisions with empty tables in your MySQL environment and import the data on WINDOWS.

1. Download the schema creation file (schema_creation_california_collisions.sql) to your computer and place it in a convenient location.

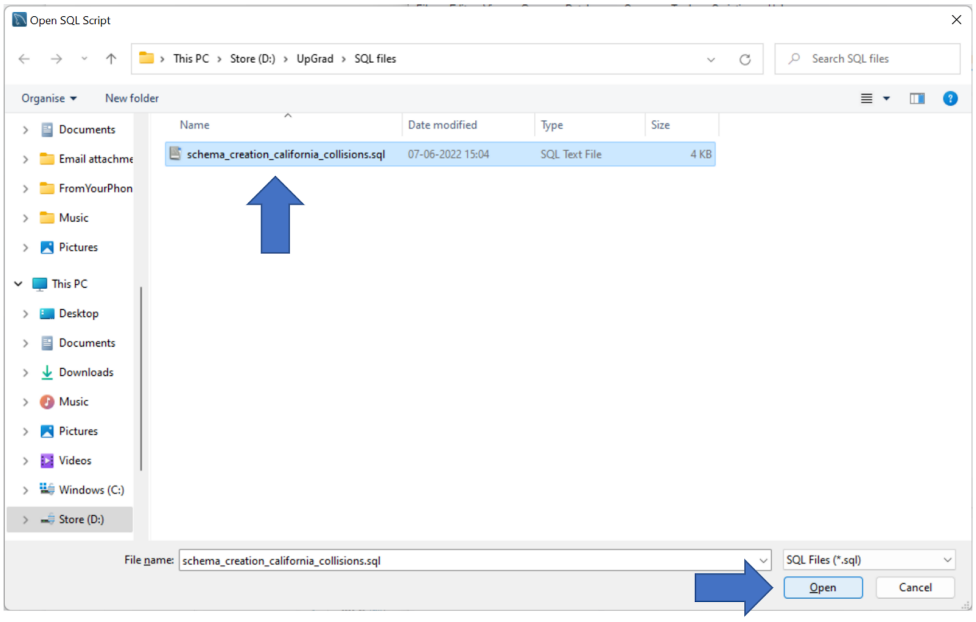
2. Open your MySQL Workbench and run your preferred SQL connected instance.



3. Press **Ctrl + Shift + O** (for Windows)
   Or
   Click on **FILE** on the menu bar and then select the **Open SQL Script…** option.

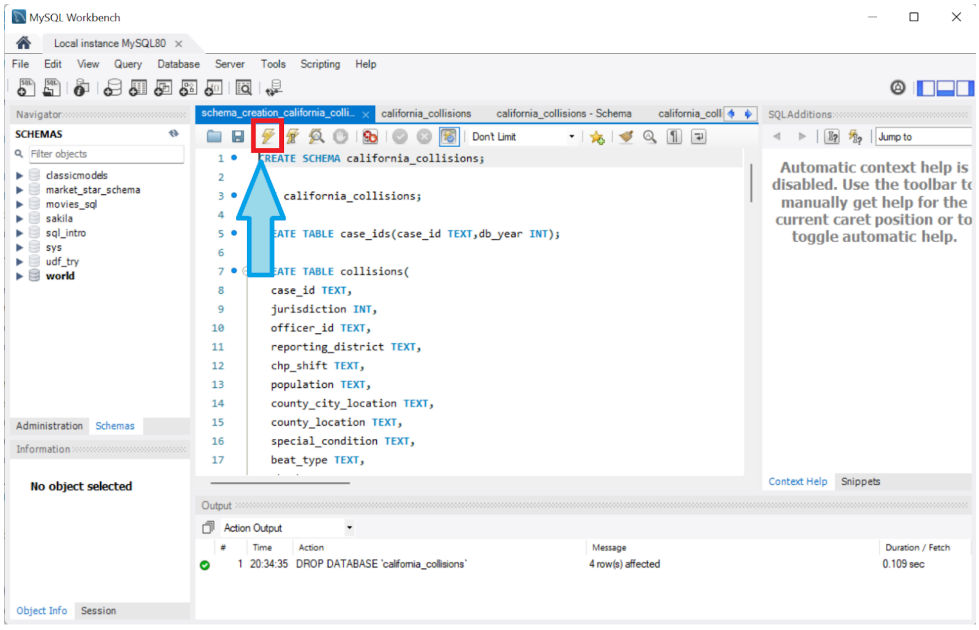


4. **Open SQL Script** Dialogue box will open.
   Select the **schema_creation_california_collisions.sql** file you have already downloaded and click on **Open**.

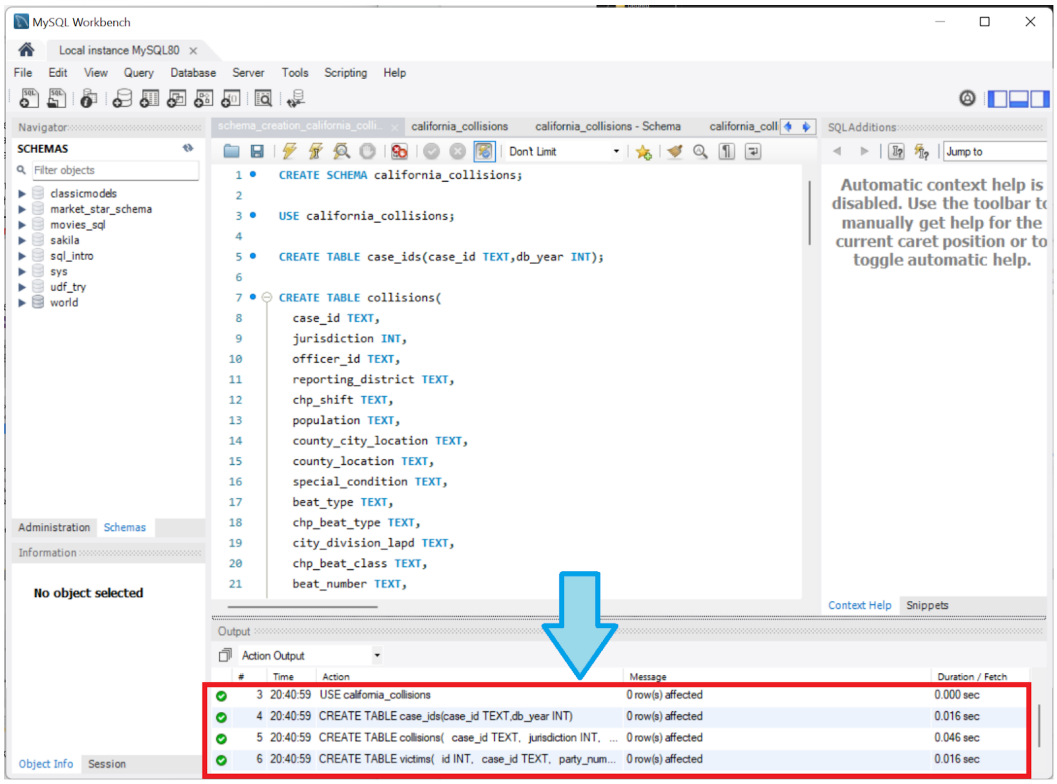


5. To run the all the queries, Press **Ctrl + Shift + Enter**
   Or

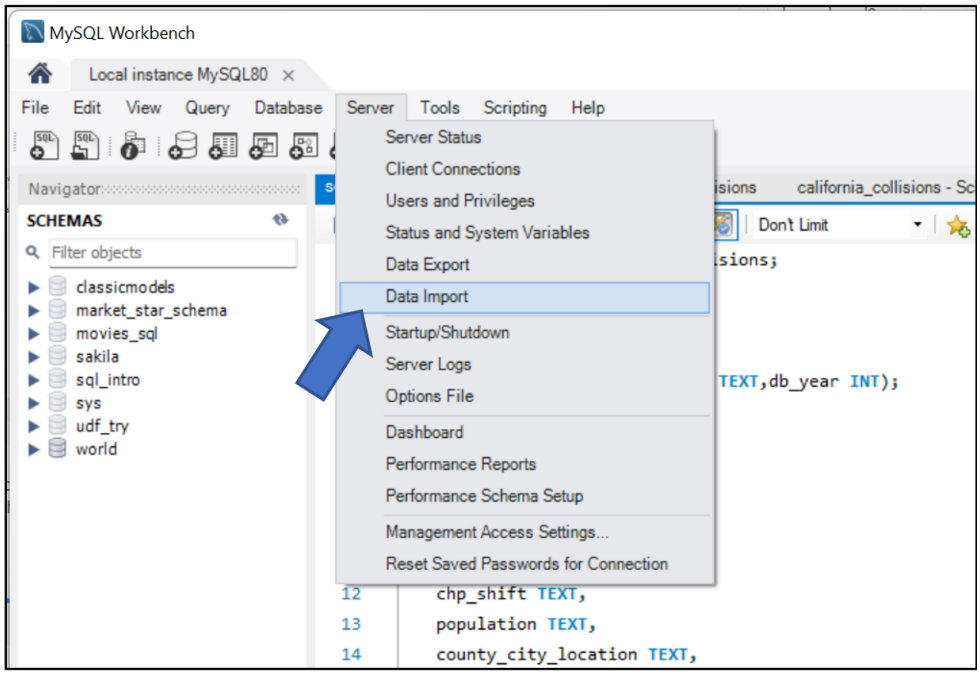
   Press the **Run Queries** button to run all the queries.



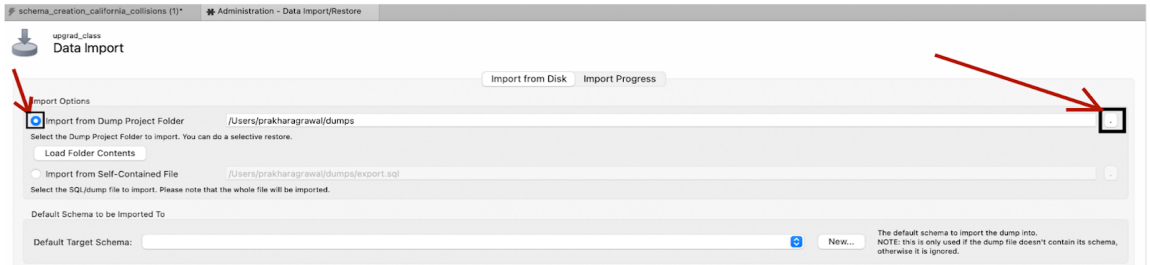
This should create the schema california_collisions with empty tables in your MySQL environment.



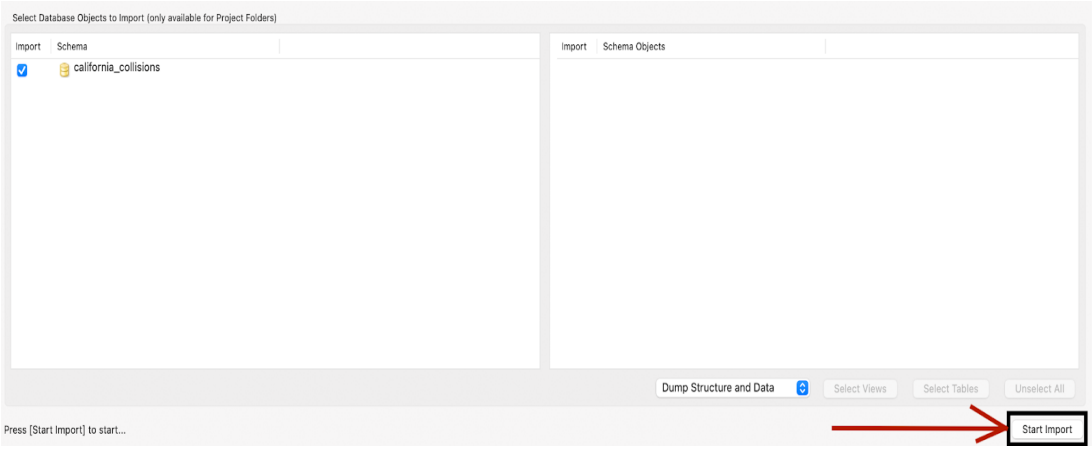
6. Now Click on **Data Import** under the **Server Menu.**

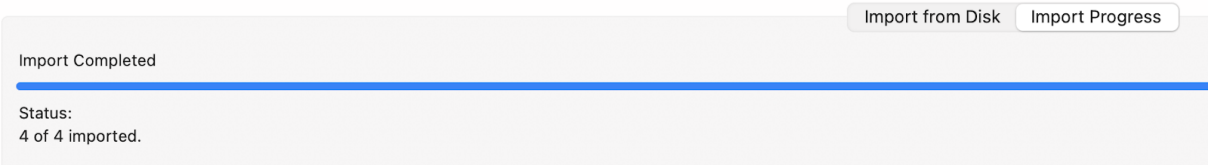


7. Select the radio button '**Import from Dump Project Folder**' and then click on the **'.'** on the right side of the screen. Navigate to the dump folder, which you can get by unzipping files from this link.



8. Click on the '**Start Import**' button at the bottom right corner of your screen





A window should now run and notify you of '**Import Progress**'. Once the import is complete, your Status should be '**4 of 4 imported**'
